

Respectfully, I am against NPRM 02-230. First the freedom to inovate and create in the technical arena is stifled by this.

Second, my personal freedom to choose and use reasonably use the equipment of my choice is impaired unreasonably.

Third, I object to the intrusion into my systems to be mandated by this on a privacy basis.

Fourth, I object to the intrusion into my systems on a bandwidth, processing and storage load/cost basis also for it's potential to limit the ways I can customize and utilize my systems for reasonable use.

Further you purpose to place power to mess in my affairs and my property into the hands of commercial entities chosen by beaurocrats to satisfy their own purposes. This is hardly in keeping with the American way of freedom from undue government mandated controls. The reasoning for this is trite when viewed against the expanded powers of government for homeland defense and is totally unjustifiable.

For your information, I am an IT professional as well as an amateur radio operator since 1960. There is no good to come of this! Thank you for your consideration of my comments.

Regards,

Russell N. Garber, Jr.
